

AUROTWIST

by
GIBERG

Giberg is offering a world first

Together with internationally leading experts in the field of micro-vulcanization, the team at Giberg has designed a unique material that is second to none. AuroTwist is flexible, 14-carat, real gold. It combines micro-particles of gold with a high-tech silicone compound - thereby offering complete flexibility and suppleness with a gold content of 585 per mille. AuroTwist was developed over several years of intensive research and is 100% produced in Switzerland. All Giberg bracelets will be available with the flexible AuroTwist real gold band as of 2023.

MATERIAL

- Flexible real gold, 14 carats (micro-gold particles, combined with a high-tech silicone compound)
- Complete flexibility and suppleness
- A special form of silicone that can be combined with 585 per mille gold particles

PRODUCTION

- 100% made in Switzerland
- The gold content is certified as 14 carats under laboratory conditions (every bracelet has a 14-carat-gold stamp)
- Specially developed nano-high-pressure injection process to ensure uniform bonding of the gold particles

DEVELOPMENT

- More than 3 years in development
- A collaboration between the Giberg team and internationally leading experts in the field of micro-vulcanization
- Exclusive rights with Giberg - AuroTwist is not available from any other brand
